Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-30, drawn to an isolated PRE nucleic acid and a recombinant virus comprising the PRE sequence as well as a method of eliciting an immune response.

Group II, claim(s) 31, drawn to a method of identifying other functional PRE's.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because under unity of invention between different categories of inventions will only be found to exist if specific combinations of inventions are present. Those combinations include:

- A) A product and a special process of manufacture of said product.
- B) A product and a process of use of said product.
- C) A product, a special process of manufacture of said product, and a process of use of said product.
- D) A process and an apparatus specially designed to carry out said process.
- E) A product, a special process of manufacture of said product, and an apparatus specially designed to carry out said process.

The allowed combinations do not include multiple products, multiple methods of using said products, and a method of making a product as claimed in the instant application.

The special technical feature of one group I is the post transcriptional regulatory element (PRE) of SEQ ID NO:1 in the context of a recombinant virus.

The special technical feature of Group II is a method of identifying other post transcriptional regulatory elements (PREs).

Accordingly, Groups I-II are not so linked as to form a single general inventive concept and restriction is proper.
